Note:

Performance is in Internal Throughput Rate (ITR) ratio based on measurements and projections using standard IBM benchmarks in a controlled environment. The actual throughput that any user will experience will vary depending upon considerations such as the amount of multiprogramming in the user's job stream, the I/O configuration, the storage configuration, and the workload processed. Therefore, no assurance can be given that an individual user will achieve throughput improvements equivalent to the performance ratios stated here.

IBM hardware products are manufactured from new parts, or new and serviceable used parts. Regardless, our warranty terms apply.

All customer examples cited or described in this presentation are presented as illustrations of the manner in which some customers have used IBM products and the results they may have achieved. Actual environmental costs and performance characteristics will vary depending on individual customer configurations and conditions.

This publication was produced in the United States. IBM may not offer the products, services or features discussed in this document in other countries, and the information may be subject to change without notice. Contact your local IBM business contact for information on the products or services available in your country.

All statements regarding future directions and intent are subject to change or withdrawal without notice, and represent goals and objectives only.

Information about non-IBM products is obtained from the manufacturers of those products or their published announcements. IBM has not tested those products and cannot confirm the performance, compatibility, or any other claims related to non-IBM products. Questions on the capabilities of non-IBM products should be addressed to the suppliers of those products.

Prices subject to change without notice. Contact your IBM representative or Business Partner for the most current pricing in your geography.

© 2012 IBM Corporation

- Komplette Kapazitätsmatrix (gleich für beide Modelle).
- Granularitätslevel an die z10 BC angelehnt um Aufrüstungen und schrittweises Wachstum zu ermöglichen
- Höhere Verfügbarkeit durch echte Spare-Prozessoren und 2-Einschub Technologie
- Um- und Aufrüstungen, CBU und On/Off CoD unterbrechungsfrei innerhalb der Modellgrenzen
- Linux only und ICF only Server möglich.

z114 SubCapacity Prozessor Granularität

- Die z114 hat 26 CP-Kapazitätslevel (26 x 5 = 130)
 - Bis zu 5 CPs
- 1:1 Regel für Spezialprozessoren zAAP und/oder zIIP pro CPs jederzeit Geschwindigkeit.
 - Alle Spezialprozessoren laufen mit voller Geschwindigkeit (3.8 Ghz)
 - Software: Processor Unit Value für IFL = 100

Anzahl der z114 CPs	Base Ratio	Ratio z10 BC zu z114
1 CP	z10 BC Z01	1.18
2 CPs	z10 BC Z02	1.16
3 CPs	z10 BC Z03	1.14
4 CPs	z10 BC Z04	1.13

Processor / Memory Subsystem Drawers (Modell M05 und M10)

Ein z10 BC Einschub

Zwei z114 Einschübe (Modell M10)

- Systemressourcen gesplittet auf 2 Einschübe (Model M10)
- Zweiter CEC Einschub (Model 10) für:
 - Mehr Spezialprozessoren
 - Mehr Memory
 - Mehr I/O Verbindungen
 - Mehr Coupling-Links als bei z10 BC
 - Mehr I/O Möglichkeiten als bei z10 BC
- Achtung: add/remove/repair eines CEC Einschubs erfordert eine Serviceunterbrechung

9

z114 RAIM Memory

- Memory technology introduced on the z196 is used on the z114
 - Redundant Array of Memory (RAIM) which in the Disk industry is known as RAID
 - Protection from Unscheduled Incident Repair Actions (UIRAs) caused by a DIMM failure

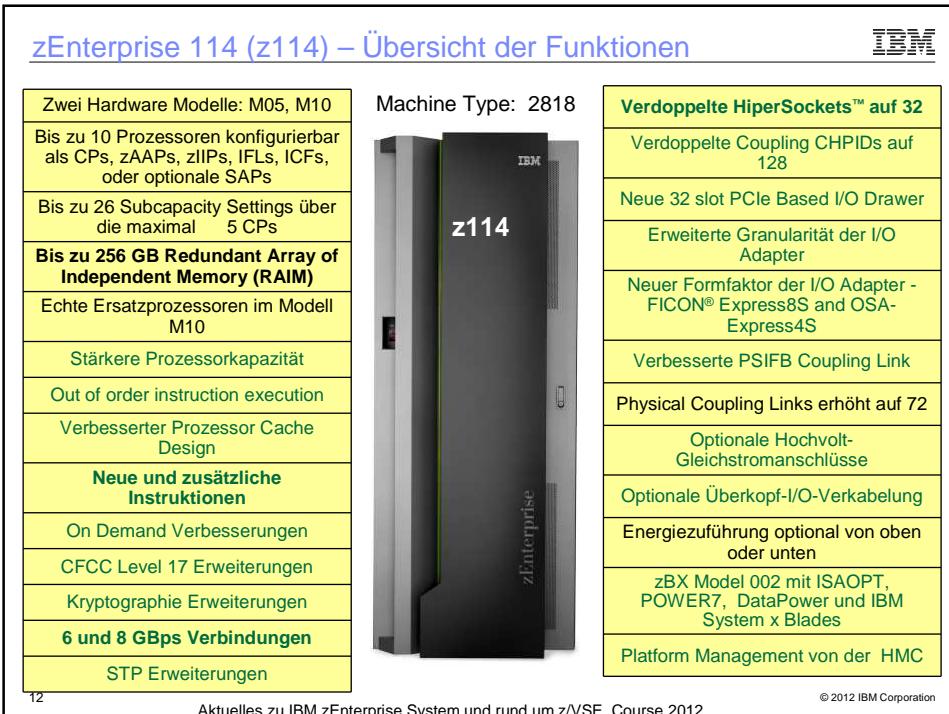

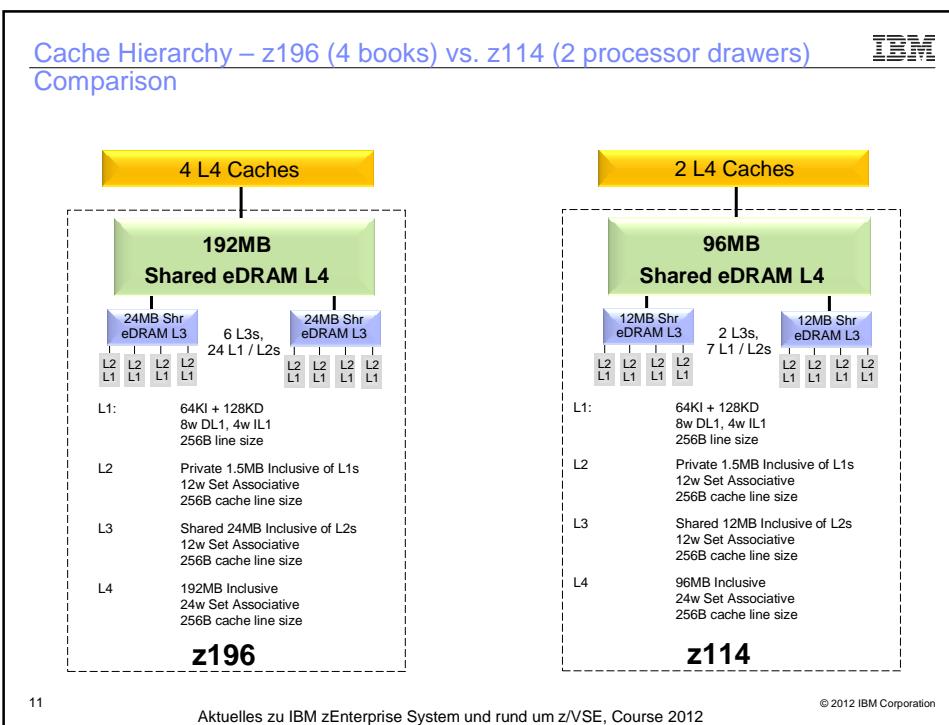

DIMM failures include all components on the DIMM. Portions of the memory controller or card failure isolated to one memory channel
- Flexible memory option not available on z114
 - Used for Enhanced Book Availability on z196

Foot notes (2 of 2)

(1) Up to 3 channel drawers standard, a combination of I/O drawers and PCIe I/O drawers as defined. Up to 4 I/O drawers via RPQ

M05		M10	
I/O Drawer	PCIe I/O Drawer	I/O Drawer	PCIe I/O Drawer
0	0	0	0
0	1	0	1
0	2	0	2
1	0	1	0
1	1	1	1
		1	2
2	0	2	0
2	1	2	1
3	0	3	0
4	0		

3rd and 4th I/O drawers are offered through via an RPQ

(2) 8 card slots per I/O drawer, 32 per PCIe I/O drawer

(3) FICON count is based on 2 PCIe I/O drawers or 4 I/O drawers

(4) Limit of 240 ESCON channels is consistent with Statement of Direction

(5) Limit of 0 ICB-4 links is consistent with Statements of Direction

(6) 8 ports of 12x, 16 ports of 1x PSIFB links available on model M05 based on 4 HCA capabilities

(7) 16 ports of 12x, 32 ports 1x PSIFB links available on model M10 based on 8 HCA capabilities

© 2012 IBM Corporation

[IT Effizienz mit z114](#)

- Bessere Performance und mehr Kapazität als eine z10 BC bei gleicher Energieaufnahme
- Raised floor und non-raised floor Konfigurationen
- Höhere Flexibilität durch Überkopf-Verkabelungsoption
- Reduzierte Bautiefe (ca. 23 cm) zur z10 BC
- Optionaler Hochvolt-Gleichstromanschluß

18

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

© 2012 IBM Corporation

Investitionsschutz der Wachstum ermöglicht

- Aufrüstbar über 2 Generationen
- Erweiterbar in jeder Serverlinie
- Temporäres oder nachhaltiges Wachstum – je nach Bedarf
- **z114 bietet 2 Modelle:**
 - M05 und M10.
 - M05 ist aufrüstbar auf M10
- **z114 M10 ist aufrüstbar auf z196 M15 (nur luftgekühltes Modell)**

IBM z10 BC / EC : ab 30.06.2012 nicht mehr ausgeliefert

(Ankündigung vom 12.07.2011: ENUS911-072.PDF)

- Physische HW-Erweiterungen sind nur noch bis zum **30.06.2012** bestellbar!
- µCode-Änderungen sind noch bis zum **30.06.2013 (1 Jahr länger)** bestellbar!

On/Off Capacity on Demand (On/Off CoD)

Temporäre CPU-Erweiterung möglich bis max. 100% der gekauften CPU-Leistung

▪ On/Off CoD - **klassisch / postpaid:**

- Man bestellt Records für gewisse CPU-Leistungen z.B. für 90 Tage, lädt diese auf das System und nutzt sie je nach Bedarf an einzelnen Tagen.
 - nur die tatsächlich genutzten Tage müssen bezahlt werden
- Achtung bei SCRT-Messungen: SW-Preis erhöht sich für den Monat!
- Records sind 180 Tagen vom Zeitpunkt der Bestellung im Resource Link gültig.

▪ On/Off CoD - **prepaid:**

- Records werden sofort nach der Bestellung bezahlt und runtergeladen.
- Keine Verfallsdauer -> gültig bis zur tatsächlichen Nutzung

On/OFF Capacity on Demand (On/Off CoD)

Voraussetzung:

- **Vertragsergänzung** müssen vereinbart werden
- **entsprechenden kostenlosen HW-Feature** müssen „enabled“ sein
 - On/Off Capacity on Demand (CoD) authorization (Feature Code 9896)
μ-Code, damit die HW bei Bedarf für “On/Off Capacity on Demand” vorbereitet ist
 - On Line CoD Buying (Flag) (Feature Code 9900)
Flag, damit über Resource Link die CoD-Records bestellt und heruntergeladen werden dürfen.
- Die Records müssen auf dem System für die tatsächliche Nutzung installiert sein
- IBM zEnterprise 196 /114 : On/Off CoD Tests sind möglich
- IBM System z10 BC/EC : nur noch bis 30.06.2013 möglich!
Alle Records, die zwar bis zum 30.6.2013 bestellt wurden, aber nicht bis spätestens dem 30.6.2013 geladen wurden, werden am 1.7.2013 gelöscht.

Statements of Direction: ESCON Channels

▪ **ESCON channels - February 15, 2011:**

The IBM zEnterprise 196 (z196) will be the last high-end server to support ESCON channels. IBM plans not to offer ESCON channels as an orderable feature on high-end System z servers which follow the z196 (machine type 2817). In addition, ESCON channels cannot be carried forward on an upgrade to such a follow-on server.

Notes:

- This new Statement of Direction supersedes the previous ESCON SOD in Announcement letter 110-170 of July 22, 2010. It also confirms the SOD in Announcement letter 109-230 of April 28, 2009 that “ESCON Channels will be phased out.”
- **This SOD does NOT** say that the z10 BC will be the last midrange server to support ESCON channels or the last to offer ESCON channels as an orderable feature.

All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice. Any reliance on these statements of general direction is at the relying party's sole risk and will not create liability or obligation for IBM.

z/VM Release Status

z/VM: helping clients “do more with less”

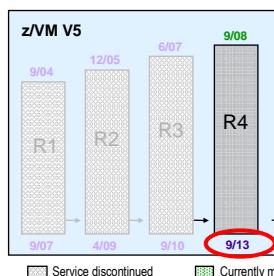

Higher core-to-core consolidation ratios

Higher levels of resource sharing and utilization

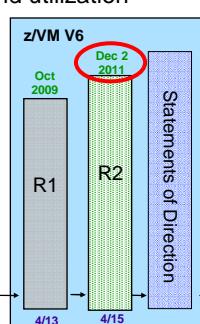

Higher levels of staff efficiency

GA:

End of Service:

Future enhancements:

- Hardware and I/O
- Ensemble management
- z/OS and Linux synergy
- Single System Image
- Virtualization
- Networking
- Security

IBM received EAL 4+ certification of z/VM V5.3 from the German Federal Office of Information Security (Bundesamt für Sicherheit in der Informationstechnik) for conformance to the Controlled Access and Labeled Security protection profiles (CAPP and LSPP) of the Common Criteria standard for IT security, ISO/IEC 15408.

[z/VM V6.1 is currently undergoing evaluation against OSPP with the labeled security extention at EAL 4+.](#)

IBM z/VM: Kurz notiert

z/VM V5.4

- Nicht mehr bestellbar seit 12.03.2012
- End of Service: 30.09.2013
- Unterstützt die IBM zEnterprise 114 mit entsprechendem Service Level und älter

z/VM V6.1

- Nicht mehr bestellbar seit GA von z/VM V6.2
- End of Service: 30.04.2013
- z/VM V6 erfordert mind. IBM System z10 EC / BC und jünger
 - läuft mit Architectural Level Set (ASL) der IBM System z10

z/VM V6.2

- Verfügbar seit 02.12.2011 (Angekündigt am 12.10.2011)
- End of Service: 30.04.2015
- Single System Image
- Live Guest Relocation
 - Plattenlayout wurde erweitert!
- IBM Schulung: z/VM 6.2.0-Update Course – Course Code ZOVME2DE

25

z/VM V6.2

Single System Image, Clustered Hypervisor, Live Guest Relocation

- Provided as an **optional priced feature**
- Connect up to four z/VM systems as members of a **Single System Image (SSI)** cluster
- Provides a set of **shared resources** for member systems and their hosted virtual machines
 - Directory, minidisks, spool files, virtual switch MAC addresses
- Cluster members can be run on the same or different z10, z196, or z114 servers
- **Simplifies systems management** of a multi-z/VM environment
 - Single user directory
 - Cluster management from any member
 - Apply maintenance to all members in the cluster from one location
 - Issue commands from one member to operate on another
 - Built-in cross-member capabilities
 - Resource coordination and protection of network and disks
- Dynamically move Linux guests from one z/VM member to another with **Live Guest Relocation (LGR)**
 - Reduce planned outages; enhance workload management
 - Non-disruptively move work to available system resources **and** non-disruptively move system resources to work
 - When combined with Capacity Upgrade on Demand, Capacity Backup on Demand, and Dynamic Memory Upgrade, you will get the best of both worlds

26

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

© 2012 IBM Corporation

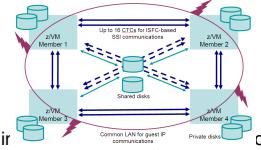

What is special about an SSI / LGR Cluster ?

- SSI provides for a set of [shared resources](#) that can be used by both CP and virtual machines, with full awareness of such sharing by CP
 - Directory, minidisks, spool files, virtual switches, dedicated devices
- User can [logon to any member](#) of the cluster
- Disconnected user can be [moved to any member](#) of the cluster while the user's virtual machine is running
- LGR is initiated by a [privileged command](#) in z/VM 6.2

Restrictions (examples):

- A guest is [not relocatable](#) when ...
 - It is anything other than Linux
 - It is using a resource that doesn't exist on the target system
 - It owns a resource that other users depend on and that would be irrelocated
 - It is using a facility which is not relocatable (e.g., CFVM)
- [No long-distance](#) connections
- [3390](#) installation only
 - System state disk must be ECKD, post-installation use of SCSI is OK
- [IBM Director](#) does not support SSI and LGR
- [zEnterprise Unified Resource Manager](#) does not support SSI and LGR

HiperSocket VSWITCH Integration with zEnterprise IEDN

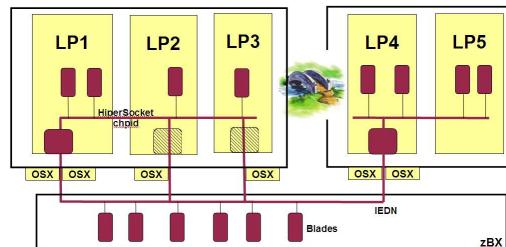

PM46988 – Available since April 13, 2012

- **Virtual Switch bridge between Ethernet LAN and HiperSockets**
 - zEnterprise IEDN (OSX) connections
 - Guests can use simulated OSA or dedicated HiperSockets
 - VLAN aware
 - One HiperSocket chpid only

- **Full redundancy**
 - Up to 5 bridges per CEC
 - One bridge per LPAR
 - Automatic takeover
 - Optionally designate one "primary"
 - Primary will perform "takeback" when it comes up
 - Each bridge can have more than one OSA uplink

Intra-CEC LPAR to LPAR communication

PIE-Strategie:

**Protect
Integrate
Extend**

Quality

Connectivity

z/OS Affinity

Capacity

z/VSE 5.1.1 Q2/2012
CICS Explorer, LFP in LPAR,
Database connector

z/VSE 5.1 Nov. 25, 2011
• zEnterprise exploitation
• ALS to System z9 (and higher)
• 64-bit virtual addressing
• No CICS/VSE 2.3 Support

z/VSE V4.3 Nov. 26, 2010
• Virtual storage (24-bit) constraint relief
• 4-digit device addresses
• Security/crypto/networking enhancements

z/VSE V4.2 Oct. 17, 2008 (EoS: 10/2012)
• More tasks, PAV, LDAP Client,
• IPv6/VSE

z/VSE V4.1 March 16, 2007 (EoS: 04/2011)
• zArchitecture only, 64 bit real addressing,
• MWLC – full and sub-capacity pricing

z/VSE V3.1 March 4, 2005
• selected zSeries features, FCP/SCSI
• 31 bit mode only

z/VSE Support for IBM Mainframe Servers

IBM Servers	z/VSE V5.1	z/VSE V4.3	z/VSE V4.2	z/VSE V4.1 (out of service)
IBM zEnterprise z196 & z114	✓	✓	✓	✗
IBM System z10 EC & z10 BC	✓	✓	✓	✗
IBM System z9 EC & z9 BC	✓	✓	✓	✗
IBM eServer zSeries 990 & 890	✗	✓	✓	✗
IBM eServer zSeries 900 & 800	✗	✓	✓	✓

On June 14, 2011, IBM announced withdrawal of service for Multiprise 3000 (7030-H30, -H50, -H70), to become effective December 31, 2012.

Please note: - z/VM V6 requires System z10 technology (or higher)
 - SUSE SLES 11 requires System z9 technology (or higher)
 - Red Hat RHEL 6 requires System z9 technology (or higher)

34 Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012 © 2012 IBM Corporation

VSE Version and Release	Marketed	Supported	End of Support
z/VSE V5.1	✓	✓	tbd
z/VSE V4.3	06/25/2012	✓	tbd
z/VSE V4.2	✗	✓	10/31/2012
z/VSE V4.1²⁾	✗	✗	04/30/2011
z/VSE V3.1¹⁾	✗	✗	07/31/2009
VSE/ESA V2.7	✗	✗	02/28/2007

On August 2, 2011, IBM announced withdrawal of service for CICS/VSE V2.3, DL/I DOS/VS V1.10, and DL/I VSE V1.11, to become effective **October 31, 2012.**

1) z/VSE V3 is 31-bit mode only. It does not implement z/Architecture, and specifically does not implement 64-bit mode capabilities. z/VSE is designed to exploit select features of IBM System z10, System z9, and zSeries hardware.
2) z/VSE V4 is designed to exploit 64-bit real memory addressing, but will not support 64-bit virtual memory addressing

CICS/VSE V2.3 und DL/I V1.10, DL/I V1.11, sowie **z/VSE V4.2**
sind ab **31.10.2012** nicht mehr im Service !

Bis dahin ist CICS/VSE V2.3 unter z/VSE V4.3 oder in älteren Releases noch im Service !

Besonderheiten im z/VSE V4.3:

- Es kann noch parallel zum CICS TS laufen, aber **nicht mehr im Coexistence-Environment**, sprich mit DL/I VSE:
Im z/VSE V4.3 läuft nur noch DL/I VSE 1.12:
DL/I VSE 1.10 (für CICS/VSE) und DL/I VSE 1.11 (für CICS TS) können nicht mehr gestartet werden
- Es wird nicht mehr mit ausgeliefert!
- **Es sollte u. a. wegen 31-Bit-Umstellungen besonders gut getestet werden – alte Vendorprodukte!**

Im **z/VSE V5.1** gibt es schon jetzt **keinen Service** mehr für CICS/VSE V2.3,
auch **nicht bis zum 31.10.2012**.

→ Daher sollten Sie bald Ihre Migration abschließen,
am besten noch unter z/VSE V4.2!

- Funktionsübersicht, siehe Course 2011
- z/VSE V4.3 ist letztes Release auf IBM zSeries
- Bietet

– weniger virtuelle Speicher-Beschränkungen

Weitere System-Programme und –Puffer sind im 31-bit-Speicher,
z.B. in den Bereichen **VSE/VSAM, DL/I und z/VSE Supervisor**

– kein CICS Coexistence Environment mehr

- neues DL/I-Release V1.12

– Ausnutzen der IBM zEnterprise und z10 Technologie

- 1 MB-Page-Unterstützung für Data Spaces - transparent für Anwendungen
- FICON Express8 und Crypto Express3 Support (ab z/VSE4.1)
- LFP-Verbindung: „Fast Path“ von z/VSE zu Linux TCP/IP in einer z/VM-mode LPAR

... und vieles mehr → s. „z/VSE V4.3 Release Guide“

- Läuft mit VSE V4.3.1 + PTFs stabil
- **z/VSE V4.3.1 hat einen Service-Stand vom 20.06.2011**
- Testen Sie nur mit einem möglichst aktuellen Service-Stand!
 - Jetzige Recommended Service Level (RSL) enthält alle PTFs bis zum **31.01.2012**.
 - Tagesaktuelle HIPER-PTFs z.B. per **PSP-Bucket** bestellbar
- Testen Sie Ihre Umgebung gründlich, besonders die Vendorprodukte

Sichern Sie sich z/VSE V4.3.1 bis zum **25.06.2012**

[z/VSE Entwicklung ab z/VSE 4.3](#)

IBM

[z/VSE V4.3 - 4Q2010](#)

- z196 toleration / exploitation
- 4-digit device addresses
- 24-bit virtual storage constraint relief
- IPv6/zVSE as optional product
- Linux Fast Path (with z/VM)

[z/VSE V5.1 - 4Q2011](#)

- 64-bit virtual memory objects
- ALS to System z9 (and higher)
- z196 / z114 exploitation
- No CICS/VSE support

[z/VSE V5.1.1 - 2Q2012](#)

- 64-bit I/O for applications
- CICS Explorer support
- Linux Fast Path in LPAR

[z/VSE V5.1: Overview](#)

IBM

Preview: 04/12/2011, Announcement: 10/12/2011, GA 11/25/2011

- 64-bit virtual addressing
- Introduces Architectural Level Set (ALS) that requires System z9 or later
- IBM zEnterprise 196 (z196) and IBM zEnterprise 114 (z114) exploitation
 - Support Static Power Save Mode for MWLC clients with subcapacity option (z196 only)
 - 4096-bit RSA keys with Crypto Express3 for enhanced security
 - Support of OSA-Express for zBX (CHPID OSX) to participate in an Intra Ensemble Data Network (IEDN) in z/VM guest or LPAR
- Exploitation of IBM System Storage options
 - Copy Export function of TS7700 Virtualization Engine for disaster recovery
 - Multi-Cluster Grid support of the TS7700 Virtualization Engine Series (TS7700)
 - IBM Storwize V7000 Midrange Disk System (z/VSE 4.2 and later)
 - IBM XIV (z/VSE 4.2 and later)
- Fast Service Upgrade (FSU) from z/VSE 4.2 and z/VSE 4.3
- Pricing
 - Midrange Workload License Charge (MWLC) pricing with sub-capacity option
 - z114: Advanced Entry Workload License Charge (AEWLC) pricing with sub-capacity option

40

[z/VSE V5.1: Overview](#)

- Networking enhancements
 - IPv6 support for Linux Fast Path
 - z/VSE z/VM IP Assist (VIA) exploitation
 - TCP/IP communication using Layer 2 (Data Link Layer)
 - Virtual Local Area Network (VLAN) support for OSA Express and Hipersockets
 - Global VLAN supported by TCP/IP for VSE/ESA and IPv6/VSE
 - General VLAN supported by IPv6/VSE
- IPv6/VSE
 - Large TCP window support, can increase throughput
 - 64 bit virtual exploitation, large TCP window storage allocated above the bar
 - Layer 2 support (OSA Express, IPv6 only)
 - VLAN support
- System management enhancements
 - SNMP Trap Client Extension monitoring – API
- High availability and disaster recovery enhancements
 - Copy Export function of TS7700 Virtualization Engine for disaster recovery
 - Multi-Cluster Grid support of the TS7700 Virtualization Engine Series (TS7700)
 - GDPS (Geographically Dispersed Parallel Sysplex) client (in a z/VM guest)
 - z/VSE supports heartbeat only
 - GDPS K-system can only monitor z/VSE
 - GDPS K-system can manage z/VM and therefore can manage z/VSE indirectly

41

[z/VSE V5.1 : Overview](#)

- System enhancements
 - Language Environment enhancements
 - PL/I multitasking enhancements
 - C run-time socket API to include IPv6 related functions
 - Callable service sample for programs
 - Additions to system programmer C samples
 - Updated LE/C support for Librarian Members, and updates to the CEETRACE utility.
 - E-business connector enhancements
 - VSE Script Connector to support LIBR access
 - VSE/POWER
 - Token as new job attribute to address spooled output
 - VTape enhancements
 - VTape Auto Close at EOJ dependent on new SCOPE keyword
 - SCOPE= SYSTEM or JOB
 - TAPE UNLOAD at EOJ (TAPE UNL=EOJ)
- CICS - Statement of general direction (SOD):
 - IBM intends to provide CICS Explorer capabilities for CICS TS for VSE/ESA, to deliver additional value.

All statements regarding IBM's plans, directions, and intent are subject to change or withdrawal without notice.

42

[z/VSE 5.1 Announcement \(04/03/2012\)](#)

- IBM z/VSE V5.1 - Additional enhancements available
- Announcement content for
 - GA on June 15, 2012:
 - CICS Explorer for z/VSE
 - Linux Fast Path in LPAR
 - Linux Fast Path via z/VSE z/VM IP Assist (z/VSE VIA)
 - z/VSE database connector
 - VSE/POWER enhancement to ease job output handling
 - IBM System Storage Tape Controller 3592 Model C07
 - (new symbolic parameter IJBVMID containing the z/VM userid if running on z/VM)
 - Later PTFs (after June 15, 2012)
 - 64-bit input/output (I/O) processing for applications
 - IPv6/VSE V1.1 enhancements
 - Secure Sockets Layer (SSL) for secure data transmission
 - Layer 2 support for OSA Express devices for IPv4 links

43

[z/VSE V5.1: 64 bit virtual addressing](#)

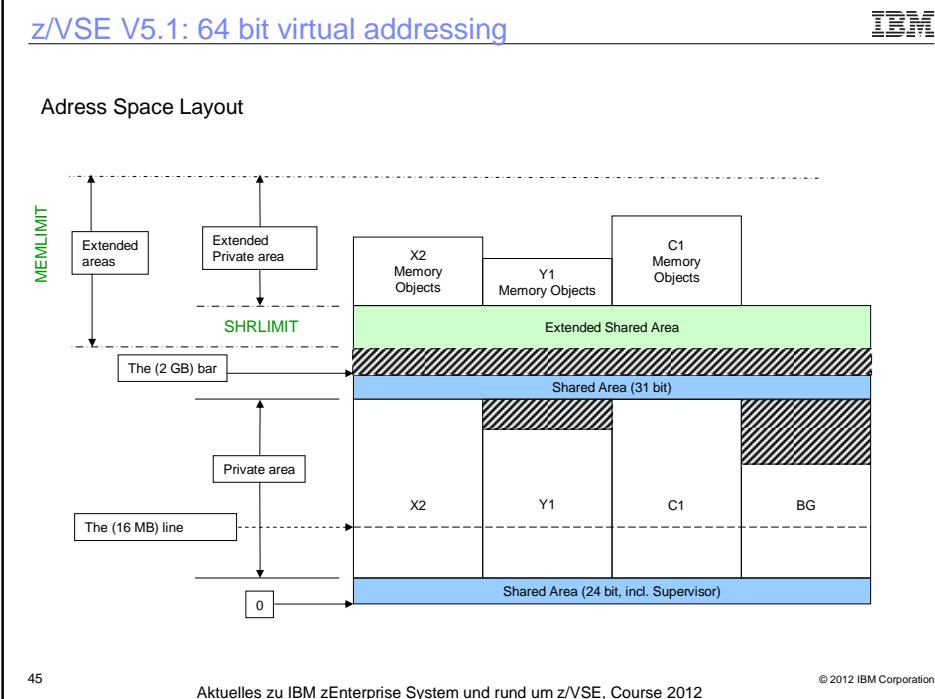

- Support 64 bit virtual addressing
- 64 bit area can be used for **data only**
 - No instruction execution above the bar
- **z/OS affinity:**
 - APIs (IARV64 services) - to manage memory objects – compatible with z/OS
 - Private memory objects for use in one address space
 - Shared memory objects to be shared among multiple address spaces
- Maximum VSIZE still limited to 90 GB
- Advantages:
 - Eases the access of large amounts of data
 - E.g. instead of using and managing data spaces
 - Reduces complexity of programs
 - Data contained in primary address space
 - Chosen design has no dependencies to existing APIs, minor impact on existing system code

z/VSE V5.1: z/VSE Tools - Overview

IBM offers a huge set of tools available on the z/VSE Homepage <http://ibm.com/zvse/downloads>

Most tools are 'as is', at no additional charge.

Connector components (part of z/VSE and officially supported) are also available here

The screenshot shows the 'Downloads' section of the IBM z/VSE homepage. It lists several tools under 'Connectors' and 'Downloads' categories, including:

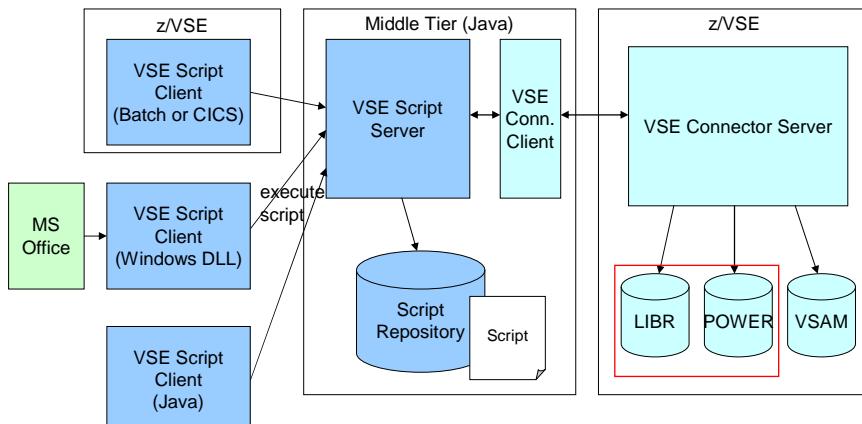

- Connectors:**
 - VSE Connector Client
 - VSE Script Server
 - VSE Navigator
 - VSE WebDAV
 - VSE Virtual Tape
 - VSMN Mapper
 - WebSphere MQ Client for z/VSE
- Downloads:**
 - VSE Script Server (updated 03/2012 for APAB PH587/55)
 - VSE Virtual Tape Service (updated 11/2011 for z/VSE V5.1 GA)
 - Linux Path Definition (updated 11/2011 for z/VSE V5.1 GA)
 - VSE System class library (updated 11/2011 for z/VSE V5.1 GA)
 - VSE Security class library (updated 11/2011 for z/VSE V5.1 GA)
 - GDCS2VSE Toolkit Version 1.0 (updated 09/2010)

© 2012 IBM Corporation

[z/VSE V5.1: VSE Script Connector](#)

- Part of the z/VSE Connectors since z/VSE V3.1
- Allows remote access to z/VSE resources and data from **non-Java platforms**
- Enhancements in z/VSE V5.1:
 - NEW!** – SYSIPT Variables Support
 - New functions: LIBR-Support, POWER binary support
 - Logging of script input and output

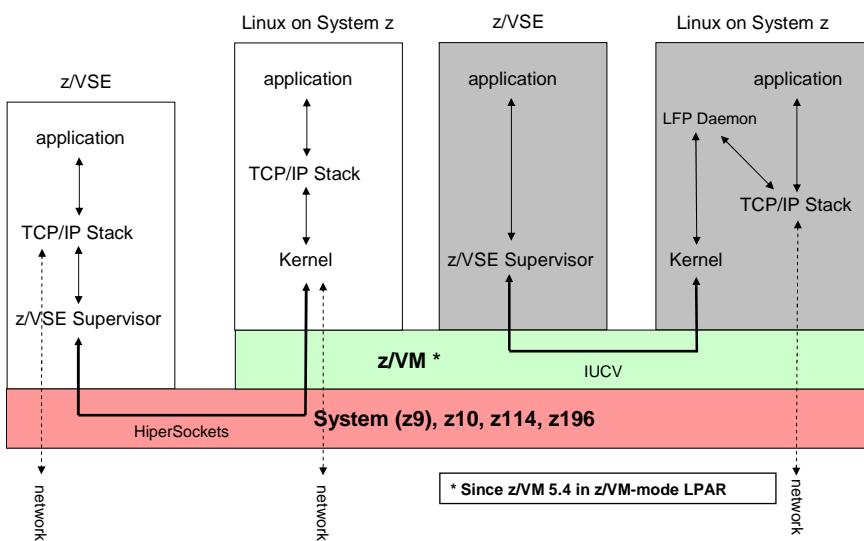

47

[Since z/VSE V4.3: Linux Fast Path in a z/VM-mode LPAR](#)

Faster communication between z/VSE and Linux applications under z/VM

48

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

© 2012 IBM Corporation

[z/VSE V4.3: Linux Fast Path in a z/VM-mode LPAR](#)

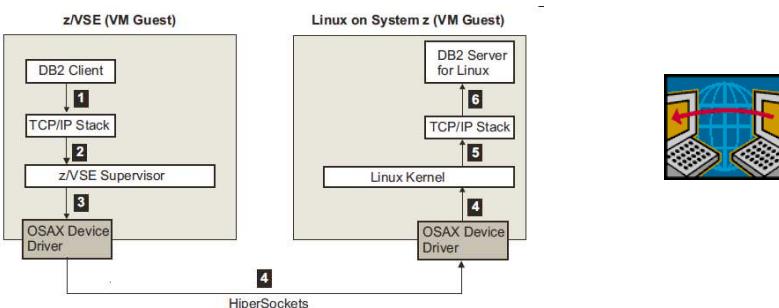

- The Linux Fast Path uses an IUCV connection between z/VSE and Linux, where both systems run in the same z/VM-mode LPAR on IBM z10 or z196 servers
- It allows selected TCP/IP applications to communicate with the TCP/IP stack on Linux without using a TCP/IP stack on z/VSE
- All socket requests are transparently forwarded to a Linux on System z system running in the same z/VM
- On Linux on System z, the LFP daemon must run
 - This daemon fulfills all socket requests by forwarding them to the Linux TCP/IP stack
- The fast path to Linux on System z provides standard TCP/IP socket APIs for programs running on z/VSE:
 - LE/C socket API via an alternative \$EDCTCPV.PHASE (IJBLFPLE)
 - EZA SOCKET and EZASMI interface via an alternative EZA interface phase IJBLFPEZ
 - CSI's (Connectivity Systems, Incorporated) assembler socket interface via the SOCKET macro
 - Other than the basic socket API, no other tools are provided
- Possible performance increase due to:
 - Less overhead for TCP/IP processing on z/VSE (TCP, sequence numbers and acknowledging, checksums, resends, etc)
 - More reliable communication method (IUCV) compared to HiperSockets, which is a network device, with all its packet drops, resends, etc.

49

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

© 2012 IBM Corporation

[Communication using TCP/IP](#)

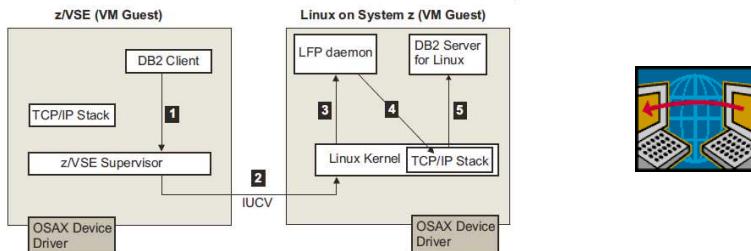

1. Data is passed from the application to the TCP/IP stack partition (using cross-partition communication mechanisms, involves dispatching).
2. TCP/IP builds IP packets (including TCP, checksums, sequence numbers, etc) and sends it through the OSAX device driver.
3. The TCP/IP stack passes the packets to the network device driver for use with HiperSockets
4. The HiperSockets network forwards the packets to the Linux image.
5. The Linux HiperSockets device driver receives the packets and passes them to the TCP/IP stack. The TCP/IP stack on Linux checks and unpacks the IP and TCP header. This processing includes handling for retransmissions, sequence numbers and acknowledging, validating checksums and so on.
6. The TCP/IP stack passes the data to the application which processes it.

50

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

© 2012 IBM Corporation

Communication using Linux Fast Path

1. The data to be sent is passed to the Linux Fast Path (LFP) stack running on z/VSE.
2. The LFP stack builds IUCV packets including the data, and sends the packets via the IUCV channel to the Linux image.
3. The Linux IUCV device driver receives the packets and passes them to the LFP Daemon running on the Linux image. The LFP Daemon then processes the data received from the IUCV channel, and translates it into a socket call.
4. The socket call is processed by the TCP/IP stack. Because the data is to be sent to an application that runs on the same Linux system, the TCP/IP stack simply forwards the data directly to the application (using a Unix pipe, thus no TCP/IP processing required).
5. The application receives the data and processes it.

51

Prerequisites for using the Linux Fast Path

- If you use a z/VM-mode LPAR, [z/VM 5.4 or later](#). Otherwise, any z/VM release that is supported by z/VSE
- If you use a z/VM-mode LPAR, [IBM System z10](#) or [zEnterprise 196/114](#). Otherwise, any server supported by z/VSE
- [z/VSE 4.3 or higher](#)
- One of these Linux on System z operating systems:
 - SUSE Linux Enterprise Server 10 Service Pack 3 together with security update kernel 2.6.16.60-0.57.1
 - SUSE Linux Enterprise Server 11 Service Pack 1
 - Red Hat Enterprise Linux 5 Update 5
 - Red Hat Enterprise Linux 6
- z/VSE and Linux on System z are configured as z/VM guests [within the same LPAR](#)
- The [IUCV](#) (“Inter-User Communication Vehicle”) is configured and enabled in both z/VM guests (z/VSE and Linux on System z)
- More Details on z/VSE Homepage <http://www-03.ibm.com/systems/z/os/zvse/>
i.e. <http://www-03.ibm.com/systems/z/os/zvse/documentation/presentations.html>

[z/VSE 5.1 + PTFs: LFP - – Linux Fast Path in LPAR](#)

Exploits the HiperSockets Completion-Queue support of IBM zEnterprise (z196, z114)

- No TCP/IP stack required on z/VSE
- System requirements
 - Supported on z114 and z196
 - Exploits HiperSockets completion queue
 - Linux on System z distribution (RHEL, SLES)
 - z/VSE 5.1 + PTF
- Available June 15, 2012

54

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

Since z/VSE V4.3: Virtual z/VSE FTP Daemon

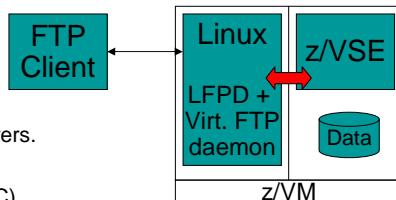

- The Virtual z/VSE FTP Daemon can be installed on **any Java-enabled platform** and **emulates an FTP server**
 - The actual access to z/VSE resources is done using the **VSE Connector Server**.
- Download: <http://ibm.com/zvse/downloads>

⇒ Fits perfectly to Linux Fast Path

▪ The Virtual z/VSE FTP Daemon:

- Handles all incoming FTP clients.
- Connects to one or multiple VSE Connector Servers.
- Is responsible for connection-handling.
- Is responsible for data translation (ASCII-EBCDIC).
- Is IPv6 ready
You can connect FTP clients using IPv6, the Virtual z/VSE FTP Daemon connects to the VSE Connector Server using IPv4.
- Supports SSL
both for the FTP connection (between FTP client and Virtual z/VSE FTP Daemon, using implicit SSL (FTPS)),
and for the connection to the VSE Connector Server (between Virtual z/VSE FTP Daemon and z/VSE host).

55

Options for using Databases with z/VSE applications

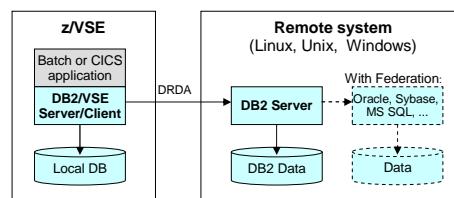

▪ DB2/VSE or DB2/VM Server

- Local database residing in z/VSE or z/VM
- Lacks support of modern SQL functionality
- Only quite old SQL level supported

▪ DB2/VSE Client Edition

- Remote database (on Linux, Windows, Unix)
- Communication via DRDA protocol
- Same old SQL level supported as DB2/VSE Server
- Can not use modern SQL functionality provided by DB2 LUW
- Can only access remote DB2 databases
Other databases (e.g. MS SQL Server, Oracle, etc) can only be accessed through IBM InfoSphere Federation Server

▪ VSAM Redirector

- Primarily used to keep Databases in sync with VSAM data
- Also allows migration from VSAM to database

▪ New: z/VSE Database Call Level Interface

- Allows z/VSE applications to access a relational database on any suitable database server
IBM DB2, IBM Informix, Oracle, MS SQL Server, MySQL, etc.
- Utilize advanced database functions and use SQL statements provided by modern database products

56

z/VSE V5.1 + PTFs: z/VSE Data base connector

IBM

z/VSE Database Call Level Interface (DBCLI)

- Allows z/VSE applications to access a relational database on any suitable database server
 - IBM DB2, IBM Informix, Oracle, MS SQL Server, MySQL, etc.
 - The database product must provide a JDBC driver that supports **JDBC V3.0** or later
- DBCLI for HLLASM, COBOL, PL/I, C or REXX applications
- Consists of
 - DBCLI client on z/VSE
 - DBCLIServer on any Java-capable platform

z/VSE 5.1+ PTFs : z/VSE support for IBM CICS Explorer – The “new face of CICS Transaction Server for VSE/ESA”

IBM

CICS Explorer

- New systems management framework for CICS TS
- Consists of client and server part
- Based on the Eclipse Rich Client Platform (RCP)
- Provides integration platform
- Scalable and intuitive way to monitor CICS systems
- Can be extended via plug-ins
- Client part of CICS Explorer common for z/OS and z/VSE
- Server part requires CICS TS and z/VSE 5.1

62 Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012 © 2012 IBM Corporation

z/VSE support for IBM CICS Explorer - Program

The screenshot shows the IBM CICS Explorer interface with the title "z/VSE support for IBM CICS Explorer - Program". The main window displays a table of programs in the PRODCICS region. The columns include Region, Name, Status, Use Count, Concurrent Use..., Language, Share Status, CEDF Status, and NEWCOPI Status. Most programs are enabled (green checkmark) and have a status of "ENABLED". Some programs like \$EDCTPM, \$EDTCPV, ARXITOPU, BSTADMII, CEEBATTN, CEEBNATN, CEECZST, CEEDEATE, CEEDATM, CEEDEAYS, CEEDECOO, CEEDESHP, CEEDYWK, CEEENW, CEEEV000, CEEEV001, CEEEV002, CEEEV003, CEEEV004, CEEEV005, CEEEV006, CEEEV007, CEEEV008, CEEEV009, CEEEV010, and CFFFV111 have a status of "NOTDEFINED". The table also includes columns for Language (mostly C), Share Status (N/A), CEDF Status (CEDF), and NEWCOPI Status (NOTREQUIRED). The bottom status bar indicates "IZE0100I Connected user SYSA to host lnxslm1.boeblingen.de.ibm.com on port 27283".

z/VSE support for IBM CICS Explorer - Files

The screenshot shows the IBM CICS Explorer interface with the title "z/VSE support for IBM CICS Explorer - Files". The main window displays a table of files in the PRODCICS region. The columns include Region, Name, Status, Open Status, Add, Browse, Delete, Read, Update, LSR Pool ID, and DS Name. The table lists various files such as BSTCNTL, DFHCSD, EZACACH, EZACONF, JESCNTL, JESDLUM, JESPRB, JESROUT, JESTRFL, INVFILE, RFSGDR1, RFSGDR2, RFPOL1, and RFPOL2. The "Open Status" column shows values like "CLOSED", "UNENABLED", "OPEN", and "NOTADDALE". The "Add" column shows values like "ADDABLE" and "BROWSABLE". The "Browse" column shows values like "BROWSABLE" and "DELETABLE". The "Delete" column shows values like "READABLE" and "UPDATABLE". The "Read" column shows values like "READABLE" and "UPDATABLE". The "Update" column shows values like "UPDATABLE" and "NOTUPDAT...". The "LSR Pool ID" and "DS Name" columns provide specific file identifiers. The bottom status bar indicates "IZE0100I Connected user SYSA to host lnxslm1.boeblingen.de.ibm.com on port 27283".

Aktuelles zu IBM zEnterprise System und rund um z/VSE, Course 2012

© 2012 IBM Corporation

- Extend z/VSE's 64 bit virtual support to 64 bit virtual I/O
- Ensures z/OS compatibility for EXCP interfaces
- DASD (ECKD) support only
- I/O can only be done for private memory objects
- Format 0 and Format 1 CCW with Format 2 IDAWs
 - New CCB parameter
- Not supported by VSAM, BAM (LIOCS)
- **Available via z/VSE 5.1 PTF some time after June 15, 2012**

- Bietet viele neue Möglichkeiten und Verbesserungen (nicht nur Konnektoren):
Infos auf z/VSE-Homepage <http://www-03.ibm.com/systems/z/os/zvse/>
 - z/VSE 5.1 Release Guide unter <http://www-03.ibm.com/systems/z/os/zvse/documentation/>
 - Live Virtual Classes unter <http://www-03.ibm.com/systems/z/os/zvse/education/>
 - IBM GSE-Vorträge unter <http://www-03.ibm.com/systems/z/os/zvse/documentation/presentations.html>
- Läuft auf z/VM V5 und V6
- Läuft auf IBM System z9 und höher
- Gegenüber z/VSE V4 hat sich die Produktnummer der *z/VSE Central Functions* geändert und muss neu lizenziert werden
 - z/VSE Central Functions (Programm-Nr: 5686**CF9**) bei z/VSE V5.1
 - z/VSE Central Functions (Programm-Nr: 5686**CF8**) bei z/VSE V4.x
- Gleiche Lizenzgebühr wie bei z/VSE V4.
 - Um die *z/VSE Central Functions* nicht zusätzlich für das bisherige z/VSE V4 bezahlen zu müssen, sollten Sie für die Migrationszeit (ohne Begründung 6 Monate lang) **Single Version Charge (SVC)** nutzen → **explizit angeben!**
 - **SVC** wird bei den SubCapacity-Messungen berücksichtigt!

- Bestellung über Shopz ohne gültige Lizenz verzögern sich!
- z/VSE V5.1.0 wird mit einem Service-Stand vom [06.10.2011 ausgeliefert.](#)
 - z/VSE V5.1.1 ist für Juni 2012 geplant (mit einem Service-Stand vom [16.04.2012](#))
- **Testen Sie nur mit einem möglichst aktuellen Service-Stand!**
 - Jetzige Recommended Service Level (RSL) enthält alle PTFs bis zum [31.01.2012](#).
 - Der nächste RSL mit Service Stand [von April](#) ist in Arbeit.
 - aktuellen HIPER-PTFs z.B. per PSP-Bucket bestellbar sind tagesaktuell !!
- **Testen Sie sorgfältig Ihre Umgebung**
 - besonders wenn Sie noch nicht z/VSE V4.3 hatten

→ Spielen Sie mit und
nutzen Sie diese Möglichkeiten!

Danke für Ihre Aufmerksamkeit !
